## Richardson's Bentgreen Lawn Grass

## FLORIDA HUMUS

Florida Humus is obtained from a natural deposit of decayed, water-grown vegetation which has accumulated for ages. It is not the same as sphagnum moss peat, but lighter, fluffier, looser, and is all purely vegetable matter.

It is taken from under water by a suction dredge, which keeps it free from weed seeds, insects, gravel, clay, and other foreign matter, and is perfectly odorless and clean when packed and shipped.

Unusually rich in organic nitrogen (containing more than 2 per cent) and absorbing 5.81 times its own weight of water in 5 hours, it is a natural home for the soil-building bacteria upon which gardening success so much depends.

### IN A NUTSHELL

Florida Humus increases the water-holding capacity of the soil.

It aerates the roots and prevents packing and cracking of the surface.

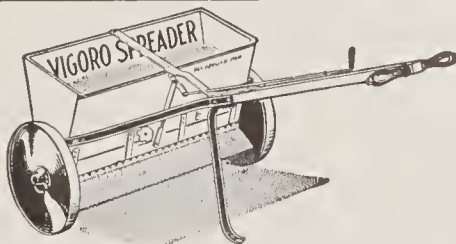

It gives body to sandy soils and prevents leaching.

It promotes vigorous and rapid beneficial bacterial growth.

It provides the necessary vegetable matter required by worn-out soil.

It supplies the natural organic nitrogen which all plants need.
